

TRAX DONUT

Inflation Instructions

THIS IS NOT COMPLETELY INFLATED. THE TRAX DONUT NEEDS MORE AIR.

When inflating the TRAX Donut, inflate the donut in TWO steps. First, fill product until firm. This step stretches the product out. Second, let sit for about 12 - 24 hours, then inflate all the way.

Our FitPAWS TRAX Donut is one of our most popular items and we receive a lot of questions about the size of the inflated donut as related to the circular product holder.

These two photos were taken by a customer who was concerned that her Donut was too “small” for the product holder. We advised that she use the 2-step inflation process described below and she was able to inflate so the Donut fit the product holder perfectly.

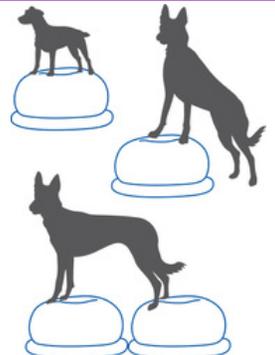

Please note: When using a hand pump, it is not easy to “pop” a Donut, however, when using an electric pump or air compressor, please inflate slowly and continue testing to ensure that it is not over-inflated. We advised that she use the 2-step inflation process described below above and she was able to increase the inflation level so that it the Donut fit the product holder perfectly.

ALL SIZE DOGS CAN USE THE TRAX DONUT

INFLATABLE CIRCULAR PRODUCT HOLDER PROVIDES STABILITY

USE SEPARATELY FOR TARGET TRAINING AND JUMPING RING
